

# GET A GRIP WITH YOUR SKID STEER

## INTRODUCING PRO-TECH'S NEW PRO CLEAT TIRES

### NEW PRODUCT

- Compatible with most skid steers
- Narrow design cuts through snow
- Deep lug tread pattern designed for maximum traction in snow and ice (most skid steer tires are designed for landscaping and construction applications)
- Rubber compound engineered to stay flexible for superior low temperature traction

## Use The Tools That Are Meant For The Job.

The Pro Cleat's narrow profile, unique rubber compound, and aggressive tread pattern allow the tire to cut through snow while achieving maximum traction. In comparison, general skid steer tires provide too much cushion and too hard of a tread compound, resulting in the skid steer riding on top of the snow. This winter, don't let your skid steer tires slow you down. Get a grip with Pro Cleat skid steer tires and stay ahead of the competition.

## Specifications

Model	Height	Ply Rating	Overall Width	Tread Width	*Weight Rating	Wheel Size
PC01S	32.2"	10	8.7"	7.0"	11,120 lbs	16" x 6"

*(All skid steers with 10x16.5 or 12x16.5 tires, using standard 8 bolt pattern)*

*\* Weight rating is total amount for all four tires*

## Width

While not often considered, the width of your skid steer tires can significantly affect the speed of your snow removal efforts. Common skid steer tires, typically have a wider width (10"-14"), and can get "bogged" down in the snow. The Pro Cleat's narrow tire base (7") solves these problems by giving your skid steer nearly double the ground pressure. This allows you to maneuver through the snow with ease, also giving your skid steer the ability to push more snow further than you ever thought possible.

## Tread Pattern

Skid steer tires designed for use in landscaping or construction can underperform in the winter. Inadequate tires result in loss of traction, short pushes, and a frustrated operator. The tread pattern on the Pro-Cleat is designed specifically for use in snow, giving your skid steer an incredible grip on the plowing surface, improving your productivity.

## Tire Compound

The Pro Cleat's exclusive rubber compound is formulated to stay flexible in cold temperatures in snow and ice for maximum traction. Like all of our products, the Pro Cleats are proudly molded in the USA.

**AVAILABLE FOR USE WITH SNOW  
PUSHERS, PLOWS, BLOWERS, BROOMS,  
AND OTHER SNOW ATTACHMENTS.**
