

PRESS RELEASE (A) "HIGH VISIBILITY TAPE"  
United States Utility  
Patent Pending  
#62/492,487

Date: 1-10-18

RE: Safety-Warning Tape > Learn About the New "VOM" Solution

"High Visibility Tape "was created by Terrand B. Grall PhD an ergonomics, design and safety expert. His innovation incorporates the science of visual orientation and mobility or VOM. Unlike other tapes, it simultaneously, marks-points to where the specific edge, corner and or location of an object exists. (see [www.hfeadvisors.com](http://www.hfeadvisors.com) for information on his expertise)

The tape has an extremely unique print-cut patterning that comes in a variety of material-color combinations that work; (\*) on any size 2 or 3 dimensional shaped objects (\*) for indoor and outdoor applications, with or without adhesive backing (\*) in both the day and night time with a combo of reflective/glow in the dark visibility (\*) by blending into the existing decors of buildings via its clear-off white coloring (\*) can be cost effectively manufactured and sold to fulfill multiple market needs. *(See 3 example use photographs, a gallery of photos is available)*

Now we can make our home, workplace, and the outdoors much easier to visually navigate identify, and find; pathways, edges of steps. Equipment/controls, obstacles, and moving objects, even in low to no light "blackout" conditions.

There is a significantly better and easier way to help reduce the risk of accidents, falls, injury and or property damage caused by the lack of or poor visual cues in our surroundings. *To learn details about the "HIGH VISIBILITY TAPE "invention and its availability to buyers or licensing partners; contact: [terryhfeadvisors@gmail.com](mailto:terryhfeadvisors@gmail.com) or 920-838 3848 (CST).*
