## Pour Point

NFPA 18 CHAPTER 5.2.1 AND ASTM D 97

### Method

Testing of the pour point effects of wetting agent was performed per NFPA 18 Section 5.2.1 and ASTM D 97.

**SAMPLE:** BAUMS CASTORINE - NOVACOOl UEF WETTING AGENT

SAMPLE	POUR POINT TEMPERATURE (C)
1	- 8

## SEPARATION

### NFPA 18 CHAPTER 5.2.3

#### Method

Testing of the separation of the wetting agent was performed per NFPA 18 Section 5.2.3. Criteria: Wetting agents shall not separate at temperatures of 0°C and 48.9°C (32°F and 120°F). No visible separation, stratification, or precipitation shall occur during the course of the test.

**SAMPLE:**

SAMPLE	Temperature °C	SEPARATION
1.	0	NONE
2.	49	NONE

**COMMENTS: Sample 2 was tested at a temperature 51°C**

## SEPARATION ON STANDING

NFPA 18 CHAPTER 5.3.2

### Method

Testing of the separation of wetting agent solution, in concentrations specified for use by the manufacturer, was performed per NFPA 18 Section 5.3.2. Wetting agents solution shall not separate at temperatures of 0°C and 48.9°C (32°F and 120°F), and 18°C ± 2.7°C. No visible separation, stratification, or precipitation shall occur during the course of the test.

## SURFACE TENSION – WETTING AGENTS – IMPACT OF LOW TEMPERATURE

### Method

Testing Conducted per ASTM D1331 with a du Nuoy type Tensiometer and NFPA 18 Section 5.2.4 and 5.3.1

P= Apparent Surface Tension

D= Density of lower phase = 1.0 d= Density upper phase = 0.0

F= Correction Factor

True Surface Tension = P X F

\* NFPA 18 Impact of Low Temperature on Surface Tansion

**SAMPLE: BAUMS CASTORINE – NOVACOOOL UEF WETTING AGENT 0.4% ( 22.2° C)**

Concentration (%)	Average Apparent Surface Tension Dynes/cm (P)	P/(D-d)	Correction Factor (F)	Average True Surface Tension Dynes/cm (P X F)
0.4	27.1	27.1	0.883	<b>23.9</b>

**SAMPLE: IMPACT OF LOW TEMPERATURE (Negative 18°C) ON SURFACE TENSION OF WETTING AGENT**

Concentration (%)	Average Apparent Surface Tension Dynes/cm (P)	P/(D-d)	Correction Factor (F)	Average True Surface Tension Dynes/cm (P X F)
0.4	27.2	27.2	0.883	<b>24.0</b>

COMMENTS: PASS – Criteria: 23.9+5 Dynes/cm. Test performed Per NFPA 18 Chapter 5.2.4 Impact of Low Temperature on Surface Tension. Surface Tension of wetting agent solution prepared from wetting agents stored at Negative 18C (0°F) shall not vary more than 5 dynes/cm from the initial measurement.

**pH Test – Oakton Instruments pH 11 Meter**

Testing Conducted per LPG for Department 3019JFPD and NFPA 18 Section 5.2.5

**SAMPLE : BAUMS CASTORINE – NOVACOOOL UEF WETTING AGENT**

Run #	pH	Average
1.	6.97	<b>6.97</b>
2.	6.97	
3.	6.98	

**Comments:** All pH measurements were taken at 16°C

**DESCRIPTION OF pH TEST**

Method

The pH test is conducted by a Oakton pH11 meter from Oakton Instruments. The meter is calibrated by three buffer solutions, pH 7.01 @25°C, 4.01 @25°C and 10.00 @25°C. The electrode is rinsed by the sample solution, and immersed into the sample. The probe is stirred gently to reach a stable reading and the result is recorded. Sampling methods and instrument settings used in obtaining the pH results are to be identical for follow-up testing to those used in obtaining the original data of the material referenced in this Procedure.

## MISCIBILITY

### NFPA 18 CHAPTER 5.2.2

#### Method

Testing of the miscibility of the wetting agent was performed per NFPA 18 Section 5.2.2. Criteria: The wetting agent shall be miscible in water at the manufacturer's minimum and maximum use concentrations, at under 100 revolutions. The speed of the stirrer motor shall be 60-rpm ± 10 rpm. An adjustable speed drill was used as stirrer motor; the speed was adjusted by the use of a light reflecting strip and a stopwatch.

**SAMPLE: NOVACOOOL UEF WETTING AGENT AT 0.4% Concentration**

SAMPLE	AGENT °C	WATER °C	RPM (stirrer)	MISCIBILITY (revolutions)
1.	21	21	60	10
2.	4	4	60	10
3.	4	21	60	10
4.	21	4	60	10

**SAMPLE: NOVACOOOL UEF WETTING AGENT AT 3.0% Concentration**

SAMPLE	AGENT °C	WATER °C	RPM (stirrer)	MISCIBILITY (revolutions)
1.	21	21	60	10
2.	4	4	60	10
3.	4	21	60	10
4.	21	4	60	20

**COMMENTS:** MISCIBLE
